IV Maritime Security Course Objectives	
A	International, regional and national Responses - Evolving Threats & Challenges - IUU Fishing
1	Emphasize the importance of defining the Atlantic as a global commons where states from different continents share important strategic interests.
2	Highlight the relationship between maritime security, food security, and national security. Consider land-based causes, namely political, social, economic, and environmental.
3	Provide an overview of IUU fishing from a global perspective and assess how non-Atlantic actors can affect IUU Fishing and, subsequently, maritime security in the region. (Mapping IUU fishing in the Atlantic Ocean, focusing on the regions where it is most prevalent).
4	Analysing the potential links between IUU fishing and other illicit activities within the framework of transnational organized crime in the regions considered (mainly piracy and armed robbery at sea).
5	Evaluate international, regional, and national responses to IUU Fishing in the Atlantic region and the various challenges its poses to Atlantic states, and how the drivers of maritime insecurity differ at the national and regional levels.
B	Consequence Delivery, Legal Authorities, & Jurisdictions
1	Discuss the key international legal frameworks for addressing criminality at sea.
2	Assess progress and challenges in the process of domesticating international legal frameworks.
3	Assess progress and obstacles in defining legal authorities and jurisdictions to deliver consequences for criminality at sea.
C	Collaboration, Information Sharing and technology.
1	Describe collaborative approaches to address common threats and challenges. Evaluate and promote the importance of coordination and collaboration (international partnerships) to address maritime security threats and challenges.
2	Discuss the importance of information sharing and technology in national, regional, and international approaches to IUU Fishing inside Maritime Security.
3	Propose concrete measures to combat the phenomenon of IUU fishing in the regions concerned, considering the role of technology, the regional capacity building, and the international cooperation.
